# **FCC Radio Test Report**

FCC ID: YW2-9701KB

TB-FCC112728 Report No.

**Applicant** : Wagons Digital Co., Ltd.

**Equipment Under Test (EUT)** 

**EUT Name** : ZAGGmate with keyboard

Model No. : ZMAP9701KB

Serial No. : N/A

: ZAGG **Brand Name** 

**Receipt Date** : 2011-12-06

**Test Date** : 2011-12-07 to 2011-12-12

**Issue Date** : 2011-12-14

**Standards** : FCC Part 15, Subpart C

: ANSI C63.4:2003 **Test Method** 

Conclusions : PASS

In the configuration tested, the EUT complied with the standards specified above,

The EUT technically complies with the FCC requirements

Ray Lai **Test/Witness Engineer** 

Approved& Authorized

This report details the results of the testing carried out on one sample. The results contained in this test report do not relate to other samples of the same product. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in the report.

TB-RF-074-1.0

### 1.5 Description of Test Mode

To investigate the maximum EMI emission characteristics generates from EUT, the test system was pre-scanning tested base on the consideration of following EUT operation mode or test configuration mode which possible have effect on EMI emission level. Each of these EUT operation mode(s) or test configuration mode(s) mentioned follow was evaluated respectively.

| For Conducted Test          |               |  |
|-----------------------------|---------------|--|
| Final Test Mode Description |               |  |
| Mode 1                      | Charging Mode |  |

| For Radiated Test           |                          |  |  |
|-----------------------------|--------------------------|--|--|
| Final Test Mode Description |                          |  |  |
| Mode 2                      | TX Mode Channel 00/39/78 |  |  |

#### Note:

- (1) The measurements are performed at the highest, middle, lowest available channels.
- (2) During the testing procedure, the continuously transmitting mode was programmed by the customer.

## 1.6 Test Facility

The tests were perform at:

Bontek Compliance Testing Laboratory Ltd

1/F., Block East H-3, OCT Eastern Ind. Zone, Qiaocheng East Road, Nanshan, Shenzhen, 518055 China

Tel: 86-755-86337020 Fax: 86-755-86337028

At the time of testing, the Laboratory is accredited. It is listed in the United States of American Federal Communications Commission (FCC), and the registration number is 338263.

The test report was fulfilled by Shenzhen Meihua Electronic Co., Ltd. Shenzhen Meihua Electronic Technology Co., Ltd. is assumed full responsibility for the accuracy and completeness of these measurements results.

Report No.: TB-FCC112728 Page: 9 of 49

# 3. Conducted Emission Test

#### 3.1 Test Standard and Limit

3.1.1Test Standard FCC Part 15.207

#### 3.1.2 Test Limit

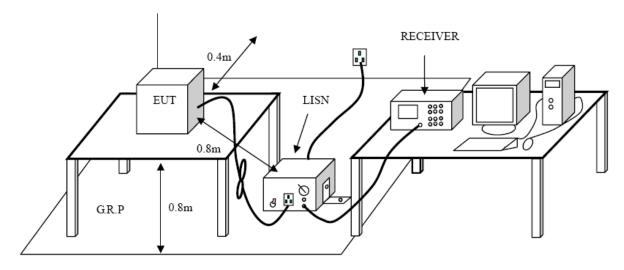

#### **Conducted Emission Test Limit**

| Frequency     | Maximum RF Line Voltage (dBμV) |               |  |
|---------------|--------------------------------|---------------|--|
| rrequency     | Quasi-peak Level               | Average Level |  |
| 150kHz~500kHz | 66 ~ 56 *                      | 56 ~ 46 *     |  |
| 500kHz~5MHz   | 56                             | 46            |  |
| 5MHz~30MHz    | 60                             | 50            |  |

#### Notes:

- (1) \*Decreasing linearly with logarithm of the frequency.
- (2) The lower limit shall apply at the transition frequencies.
- (3) The limit decrease in line with the logarithm of the frequency in the range of 0.15 to 0.50MHz.

### 3.2 Test Setup

#### 3.3 Test Procedure

The EUT was placed 0.8 meters from the horizontal ground plane with EUT being connected to the power mains through a line impedance stabilization network (LISN). All other support equipments powered from additional LISN(s). The LISN provide 50 Ohm/50uH of coupling impedance for the measuring instrument.

Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle 30 to 40 cm long.

Report No.: TB-FCC112728
Page: 10 of 49

I/O cables that are not connected to a peripheral shall be bundled in the center. The end of the cable may be terminated, if required, using the correct terminating impedance. The overall length shall not exceed 1 m.

LISN at least 80 cm from nearest part of EUT chassis.

The bandwidth of EMI test receiver is set at 9kHz, and the test frequency band is from 0.15MHz to 30MHz.

# 4. Radiated Emission Test

### 4.1 Test Standard and Limit

4.1.1 Test Standard FCC Part 15.209

4.1.2 Test Limit

### Radiated Emission Limit(9kHz~1000MHz)

| Frequency<br>(MHz | Field Strength (microvolt/meter) | Measurement Distance (meters) |  |  |  |  |  |
|-------------------|----------------------------------|-------------------------------|--|--|--|--|--|
| 0.009~0.490       | 2400/F(KHz)                      | 300                           |  |  |  |  |  |
| 0.490~1.705       | 24000/F(KHz)                     | 30                            |  |  |  |  |  |
| 1.705~30.0        | 30                               | 30                            |  |  |  |  |  |
| 30~88             | 100                              | 3                             |  |  |  |  |  |
| 88~216            | 150                              | 3                             |  |  |  |  |  |
| 216~960           | 200                              | 3                             |  |  |  |  |  |
| Above 960         | 500                              | 3                             |  |  |  |  |  |

### Radiated Emission Limit (Above 1000MHz)

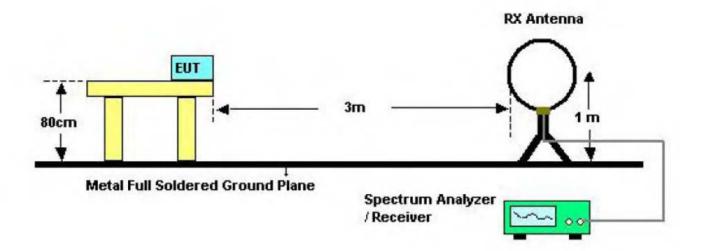

| Frequency  | Class A (dBuV | /m)(at 3 M) | Class B (dBuV | //m)(at 3 M) |
|------------|---------------|-------------|---------------|--------------|
| (MHz)      | Peak Average  |             | Peak          | Average      |
| Above 1000 | 80            | 60          | 74            | 54           |

### Note:

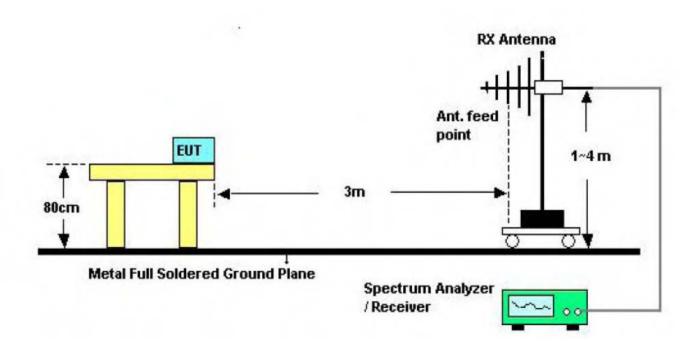

- (1) The tighter limit applies at the band edges.
- (2) Emission Level(dBuV/m)=20log Emission Level(Uv/m)

Report No.: TB-FCC112728 Page: 14 of 49

# 4.2 Test Setup

Bellow 30MHz Test Setup

Bellow 1000MHz Test Setup

Report No.: TB-FCC112728 Page: 15 of 49

Above 1GHz Test Setup

#### 4.3 Test Procedure

- (1) The measuring distance of 3m shall be used for measurements at frequency up to 1GHz and above 1 GHz. The EUT was placed on a rotating 0.8m high above ground, the table was rotated 360 degrees to determine the position of the highest radiation.
- (2) The Test antenna shall vary between 1m and 4m, Both Horizontal and Vertical antenna are set to make measurement.
- (3) The initial step in collecting conducted emission data is a spectrum analyzer peak detector mode pre-scanning the measurement frequency range. Significant peaks are then marked and then Quasi Peak detector mode re-measured.
- (4) If the Peak Mode measured value compliance with and lower than Quasi Peak Mode Limit Bellow 1 GHz, the EUT shall be deemed to meet QP Limits and then no additional QP Mode measurement performed. But the Peak Value and average value both need to comply with applicable limit above 1 GHz.
- (5) For the actual test configuration, please see the test setup photo.

### 4.4 EUT Operating Condition

The Equipment Under Test was set to Continual Transmitting in maximum power.

Report No.: TB-FCC112728

### Other harmonics emissions are lower than 20dB below the allowable limit.

Note: (1) All Readings are Peak Value and AV.

- (2) Emission Level= Reading Level + Probe Factor +Cable Loss
- (3) Data of measurement within this frequency range shown " -- " in the table above means the reading of emissions are attenuated more than 20dB below the permissible limits or the field strength is too small to be measured.

Report No.: TB-FCC112728 Page: 23 of 49

# 5. Restricted Bands Requirement

### 5.1 Test Standard and Limit

5.1.1 Test Standard FCC Part 15.209 FCC Part 15.205

5.1.2 Test Limit

| Restricted Frequency | Class B (dBuV/m)(at 3 M) |         |  |
|----------------------|--------------------------|---------|--|
| Band<br>(MHz)        | Peak                     | Average |  |
| 2310 ~2390           | 74                       | 54      |  |
| 2483.5 ~2500         | 74                       | 54      |  |

### 5.2 Test Setup

### 5.3 Test Procedure

- (1) The measuring distance of 3m shall be used for measurements at frequency up to 1GHz and above 1 GHz. The EUT was placed on a rotating 0.8m high above ground, the table was rotated 360 degrees to determine the position of the highest radiation.
- (2) The Test antenna shall vary between 1m and 4m, Both Horizontal and Vertical antenna are set to make measurement.
- (3) The initial step in collecting conducted emission data is a spectrum analyzer peak detector mode pre-scanning the measurement frequency range. Significant peaks are then marked and then Quasi Peak detector mode re-measured.

Report No.: TB-FCC112728
Page: 24 of 49

(4) If the Peak Mode measured value compliance with and lower than Quasi Peak Mode Limit Bellow 1 GHz, the EUT shall be deemed to meet QP Limits and then no additional QP Mode measurement performed. But the Peak Value and average value both need to comply with applicable limit above 1 GHz.

(5) For the actual test configuration, please see the test setup photo.

# 5.4 EUT Operating Condition

The Equipment Under Test was set to Continual Transmitting in maximum power.

# 8. Channel Separation and Bandwidth Test

#### 8.1 Test Standard and Limit

8.1.1 Test Standard FCC Part 15.247

8.1.2 Test Limit

| FCC Part 15 Subpart C(15.247) |   |                      |  |  |  |
|-------------------------------|---|----------------------|--|--|--|
| Test Item                     | Limit   | Frequency Range(MHz) |  |  |  |
| Bandwidth                     | <=1 MHz<br>(20dB bandwidth) 2400~2483.5                             |                      |  |  |  |
| Channel Separation            | >25KHz or >two-thirds of<br>the 20 dB bandwidth<br>Which is greater | 2400~2483.5          |  |  |  |

## 8.2 Test Setup

#### 8.3 Test Procedure

- (1) The EUT was directly connected to the spectrum analyzer and antenna output port as show in the block diagram above.
- (2) Spectrum Setting:

Channel Separation: RBW=30 kHz, VBW=100 kHz.

Bandwidth: RBW=10 kHz, VBW=30 kHz.

- (3) The bandwidth is measured at an amplitude level reduced 20dB from the reference level. The reference level is the level of the highest amplitude signal observed from the transmitter at the fundamental frequency. Once the reference level is established, the equipment is conditioned with typical modulating signal to produce the worst –case (i.e the widest) bandwidth.
- (4) Measure the channel separation the spectrum analyzer was set to Resolution Bandwidth:30 kHz, and Video Bandwidth:100 kHz. Sweep Time set auto.

### 8.4 EUT Operating Condition

The EUT was set to the Hopping Mode for Channel Separation Test and continuously transmitting for the Bandwidth Test.

|-------------------------------------|--|-------------|--|--|--|
| Test Item Limit Frequency Range(MHz |  |             |  |  |  |
| Peak Output Power                   | Hopping Channels>75 Power<1W(30dBm) Other <125 mW(21dBm) | 2400~2483.5 |  |  |  |

### 9.2 Test Setup

#### 9.3 Test Procedure

- (1) The EUT was directly connected to the spectrum analyzer and antenna output port as show in the block diagram above.
- (2) Spectrum Setting: Channel Separation: RBW=1 MHz, VBW=1 MHz.

# 9.4 EUT Operating Condition

The EUT was set to continuously transmitting in the max power during the test.

# 9.5 Test Equipment

| Description | Manufacturer | Model No. | Serial No. | Cal. Date  | Cal. Date  |
|-------------|--------------|-----------|------------|------------|------------|

# 10. Antenna Conducted Spurious Emission

#### 10.1 Test Standard and Limit

### 10.1.1 Test Standard

FCC Part 15.247 (c)

#### 10.1.2 Test Limit

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power. In case the emission fall within the restricted band specified on 15.205(a), then the 15.209(a) limit in the table below has to be followed.

| Frequencies<br>(MHz) | Field Strength<br>(microvolt/meter) | Measurement Distance (meters) |
|----------------------|-------------------------------------|-------------------------------|
| 0.009~0.490          | 2400/F(KHz)                         | 300                           |
| 0.490~1.705          | 24000/F(KHz)                        | 30                            |
| 1.705~30.0           | 30                                  | 30                            |
| 30~88                | 100                                 | 3                             |
| 88~216               | 150                                 | 3                             |
| 216~960              | 200                                 | 3                             |
| Above~960            | 500                                 | 3                             |

# 10.2 Test Setup

#### 10.3 Test Procedure

- (1) The EUT was directly connected to the spectrum analyzer and antenna output port as show in the block diagram above.
- (2) Spectrum Setting:

RBW=100 KHz, VBW=100 KHz.

Frequency range: from 30MHz to 25 GHz.

# 11. Antenna Requirement

### 11.1 Standard Requirement

#### 11.1.1 Standard

FCC Part 15.203

#### 11.1.2 Requirement

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

#### 11.2 Antenna Connected Construction

The directional gains of the antenna used for transmitting is 1.87dBi, and the antenna connector is de-signed with permanent attachment and no consideration of replacement. Please see the EUT photo for details.

#### 11.2 Result

The EUT antenna is a printed Antenna. It complies with the standard requirement.
